Experience

Interstate *July 2026 – Present*
Full-Stack Engineer

- Built a multi-chain Trenches experience combining live Solana, BNB, Base, and Robinhood feeds, so users can scan tokens across chains without switching views. Kept filters, trade routes, and quick-buy amounts chain-specific.
- Added verified quote-token badges to trade pages, hiding native-token badges and linking to a quote asset's chart only when candle data is available.
- Connected Go indexers, Redis, token services, REST/WebSocket APIs, and React clients to preserve holder-count provenance across **four EVM chains**.
- Built an idempotent ingestion pipeline for **1,064 KOL wallets**, using strict address validation and transactional upserts to prevent duplicate records.
- Developed resumable ERC-20 balance-backfill tooling with incremental watermarks, reconciliation, adaptive RPC scanning, and execution-budget planning.
- Built reusable chain and launchpad UI infrastructure across Pulse, search, portfolio, and trade pages for **56 venues**; validated **53 smart-contract integrations** with typed configuration and automated tests.

Ocean Friends *Oct 2025 – Mar 2026*
Data Analyst

- Recovered **100,000 claims** by identifying missing Electronic Remittance Advice (ERA) data and the affected records.
- Analyzed claims and operational datasets in BigQuery, surfacing data-quality issues and claim-processing discrepancies for investigation.
- Automated recurring reports, exception alerts, and stakeholder emails, reducing manual reporting work.

Education

Banasthali Vidyapith University 2023 – 2026
Bachelor of Computer Applications (BCA) Jaipur, India
CGPA: 8.6

Projects

- **Prep CEX (Demo) (GitHub)** *May 2026 – Present*
  Tech: Node.js, Express, Redis Streams
  - Built a perpetual-futures exchange with a trading interface, real-time order matching, position tracking, and margin validation.
  - Used Redis Streams to coordinate order placement, fills, and position updates across independent services.
- **AI-Based Skill Recommendation System (Demo) (GitHub)** *Feb 2026 – Apr 2026*
  Tech: Python, TF-IDF, Cosine Similarity
  - Matched user profiles against job requirements to recommend missing skills, relevant companies, and salary insights.
- **FunShiksha – Gamified Learning Platform (Demo)** *SIH 2025*
  Tech: Lovable, React, PWA, Node.js
  - Developed an offline-first multilingual PWA for rural STEM learning without continuous internet access.
  - Built a teacher dashboard to track student progress and identify learning gaps.
  - Delivered the platform with a collaborative team in **3–4 days**.

Technical Skills

Languages: Go, C++, JavaScript, Python, TypeScript
Backend & APIs: Node.js, Express, FastAPI, REST, WebSocket APIs
Frontend: React, Tailwind CSS, Progressive Web Apps (PWA)
Data & Storage: Redis, Redis Streams, BigQuery, Supabase
Blockchain: EVM, ERC-20, Smart-Contract Integration, RPC

Achievements

- Reached the **Top 10** in the TLE Eliminators Competitive Programming course.
- Selected among the **Top 45 teams nationwide** in **Smart India Hackathon (SIH) 2025**.
- Contributed "Find & Book Nearby Spots" to EventMappr through **GSSoC 2025**, adding custom map markers, filtering, and location refresh **(GitHub)**.
