Experience

Interstate *July 2026 – Oct 2026*
Full-Stack Engineer

- Owned **holder-count provenance across four EVM chains**, spanning Go indexers, Redis, token services, REST/WebSocket APIs, and React clients.
- Built a **validated, idempotent ingestion pipeline for 1,064 KOL wallets**, using transactional upserts and strict blockchain-address validation.
- Developed **reusable chain and launchpad UI infrastructure supporting 56 venues** across Pulse, search, portfolio, and trade pages.
- Engineered **safe ERC-20 balance-backfill tooling** with incremental watermarks, reconciliation, adaptive RPC scanning, and execution-budget planning.
- Designed **typed multi-chain runtime configuration** and validated **53 smart-contract integrations**, supported by race tests, contract tests, and CI checks.

Ocean Friends *Oct 2025 – Mar 2026*
Data Analytics Intern

- Analyzed **large-scale claims and operational datasets in BigQuery**, identifying data-quality issues and actionable trends.
- Detected missing **Electronic Remittance Advice (ERA) data**, helping identify and recover approximately **100,000 affected claims**.
- Built **automated email workflows** for recurring reports, exception alerts, and stakeholder updates.
- Developed **support and operations reports**, reducing manual data extraction and improving visibility into claim-processing issues.
- Partnered with support and operations teams to investigate discrepancies, define affected claim populations, and validate recovery outcomes.

Education

Banasthali Vidyapith University 2023 – 2026
Bachelor of Computer Applications (BCA) Jaipur, India
CGPA: 8.6

Projects

- **Prep CEX (Demo) (GitHub)** *May 2026 – Present*
  Tech: [Node.js, Express, Redis Streams]
  - Built an **event-driven perpetual futures exchange backend** with an in-memory order matching engine, position management, and margin validation.
  - Designed a **Redis Streams-based architecture** to coordinate order placement, fills, position updates, and real-time notifications across independent services.
- **AI-Based Skill Recommendation System (Demo) (GitHub)** *Feb 2026 – Apr 2026*
  Tech: [Python, TF-IDF, Cosine Similarity]
  - Recommends **missing skills, companies, and salary insights** by matching user profiles to job requirements.
- **FunShiksha – Gamified Learning Platform (Demo)** *SIH 2025*
  Tech: [Lovable, React, PWA, Node.js]
  - Developed an **offline-first multilingual PWA** for rural STEM education with dynamic translation.
  - Built a **teacher dashboard for progress tracking**; delivered the platform in **3–4 days** with a **6-member team**.

Open Source

GSSoC 2025 – EventMappr Contributor (GitHub) *Jun 2025 – Aug 2025*

- Implemented **"Find & Book Nearby Spots"** with custom map markers, smart filtering, and location refresh.

Technical Skills

Languages: C++, JavaScript, Python, TypeScript
Backend & APIs: Node.js, Express, FastAPI, REST APIs, WebSocket APIs
Frontend: React, Tailwind CSS, Progressive Web Apps (PWA)
Data & Storage: BigQuery, Supabase, Redis, Redis Streams
Blockchain: EVM, ERC-20, Smart-Contract Integration, RPC

Achievements

- Improved from approximately **Rank 500 to Top 10** in the TLE Eliminators Competitive Programming course.
- Selected among the **Top 45 teams nationwide** in **Smart India Hackathon (SIH) 2025**.
- Contributed to **GSSoC 2025**, with a feature successfully merged into the production codebase.
